

* level sensor with reed chain
* analogue output and/or switching output
* alternative with temperature sensor
* available in various materials
* designed for industrial use
* small, compact construction
* very easy installation

## PRINCIPLE

A float equipped with a magnet switches a reed chain within the brass lining, which is actuated like a potentiometer using resistors. The resolution is $10-20 \mathrm{~mm}$ and very repeatable. The Flex sensor electronics convert the potentiometer values into standardised outputs using a microcontroller and, in addition to an analogue output, also provides a switching output Alternatively, a temperature sensor can be integrated which actuates the analog output or the switching output.

## TERMINAL ASSIGNMENT

Before the electrical installation, make sure that the supply voltage corresponds to the data provided!

Please you use shielded cable, signal lines $<30 \mathrm{~m}$ and power supply lines < 10m.

## TECHNICAL DATA

| lengths, pitch, and <br> operating pressure | see table under "DIMENSIONS" |
| :--- | :--- |
| working temperature | $-20 . .70^{\circ} \mathrm{C}$ <br> (with goose-neck max. $105^{\circ} \mathrm{C}$ ) |
| storage temperature | $-20 . .80^{\circ} \mathrm{C}$ |
| voltage supply | $18 . .30 \mathrm{VDC}$ |
| power consumption | $4 . .20 \mathrm{~mA}$ mA or 0..10 VDC |
| analogue output | transistor output, PNP or NPN) <br> max. load of 100mA, available <br> as minimum or maximum switch, <br> short circuit proof/ <br> reverse polarity protected |
| switching output | approx. 2\% ( >1 increment ) or <br> optional. Position depends on <br> minimum or maximum. |
| switching hysteresis | yellow LED <br> (ON = OK /OFF = alarm) |
| display (only in case of <br> switching output) | at locking plug M 12x1, 4-pole |
| connection | IP67 <br> protection class <br> materials brass and spansil or <br> in contact with media |
| material <br> electronic housing | stainless steel 1.4571 |

## PROGRAMMING

Designs with a limit switch have a magnetic contact by means of which the current measurement value can be assumed as a limit value. It is programmed by applying a magnet to the marking on the type plate for 0.5 to 2 seconds. If the contact time is too short or too long, no programming will take place (protection against magnetic fields). Immediately after programming, the switching output enters the OK state (LED on, output switched through, e.g. PNP = high or NPN = low).

## DIMENSIONS

Flex-LC-45m

Flex-LC-44m

A goose-neck (optional) between the electronic head and the primary sensor provides for freedom of movement in the alignment and reading direction of the sensor. At the same time, this option provides for a thermal decoupling between both units.

A sensor family:
Flex-LC level sensors, reed chain, Flex system
Options:
B connection size:

special measurement range, temperature:
maximum $120^{\circ} \mathrm{C}$ (standard $=70^{\circ} \mathrm{C}$ )

minimum $-20^{\circ} \mathrm{C}$ (standard $=0^{\circ} \mathrm{C}$ )
end frequency (max. 2000 Hz )

turn-on delay (from alarm to OK) $\square$ s
turn-off delay (from OK to alarm)

s
power-on delay

D analogue output:
(time after the supply is created; in this time the switching output is not activated)
switching output with permanent setting

${ }^{\circ} \mathrm{Cm}$
special hysteresis
(standard = 2\% F.S.)
goose-neck
(recommended for application temperatures over $70^{\circ} \mathrm{C}$ )

In case of empty fields, the standard
setting will be selected automatically.

H switching signal

| L | minimum switch |
| :--- | :--- |
| H | maximum switch |
| R | frequency output |
| K | no switching output |

I inversion of output:
O standard output
inverted output
